CLOVER INFOTECH

# MySQL DB Upgrade from 5.5 Community to 8.0 Enterprise

for a Logistics Company

**CASE STUDY**

# Revenue Augmentation

Clover Infotech's solution enhanced the performance of the customer's critical application that was responsible for tracking shipments, creating delivery receipts, and generating invoices. It helped the customer to augment revenues, collections and enhance cashflows while enabling them to make well-informed real-time decisions.

# The Challenge

- The customer ran a critical logistics application that was used to track shipments end-to-end, creation of delivery receipts, invoicing, etc.

  The application was hosted on MySQL database Community edition version 5.5

- The application performance was not up to the mark. Audit logs were not captured and hence tracking of shipments was slow and challenging

- Subsequent creation of delivery receipts and invoice generation too was getting impacted hence it affected the seamlessness of the business and made operations inefficient

- The customer wanted to enhance the performance of this critical application as it was impacting business, revenues, and operational efficiency

# The Solution

- Clover Infotech suggested an upgrade from MySQL Community edition 5.5 to Enterprise Edition 8.0.

- It enhanced the operational efficiency as the application was now running seamlessly.

- The audit logs reflected changes and the tracking of shipments was done in real-time. It enabled the customer to make timely decisions on re-routing, and managing updates with the drivers, warehouses, buyers, sellers, etc.

- The enterprise edition enhanced the security of the application and its performance thereby enabling the customers to generate delivery receipts faster, generate invoices in time and ensure better collections, cashflows and revenue generation.
